DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16 and 21-33, drawn to a flow meter sensing circuitry and a method of detecting a potential fault in the circuitry, classified in class 73, subclass 861.17.
 - II. Claims 17-20, drawn to an analysis tool for detecting a potential fault in a flow meter installation, classified in class 73, subclass 861.17.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the flow meter circuitry does not required an analysis tool for it to function properly. The subcombination has separate utility such as detecting a fault in a flow meter installation.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 2855

A telephone call was made to Ross Hunt, Jr. on September 26, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
